Frequency of Genotype C/C at Position 1,165 (389 Arg/Arg)

# EMERGENCY INFORMATION

## EHLERS-DANLOS

### **HANDLE THIS PATIENT WITH GREAT CARE.**

- Joints may be lax and dislocate easily.
  - Skin tearing, splitting and bruising are common.
  - Mitral Valve Prolapse, umbilical and inguinal hernias may be present. *Arterial or intestinal rupture commonly presents as acute abdominal or flank pain that can be diffuse or localized.*
  - Cerebral arterial rupture may present with altered mental status and be mistaken for drug overdose.
- 
- Emergency procedures (especially for Vascular EDS) often require trauma, vascular surgery, ICU. *Elective surgery and procedures should be avoided whenever possible. Non-invasive testing is highly preferred.*
  - Healing may be delayed, with irregular scarring. *Use alternatives to sutures whenever possible. Retain sutures/staples for twice the normal period; watch for wound reopening and dehiscence.*
- 
- Anesthetists should use caution upon intubation, as jaw dislocation is common.
  - Local anesthetics are usually inadequate or short-lasting.
  - Potential spinal and/or cerebellar involvement may increase general anesthetic and surgical risks.
